

## PRESS RELEASE

### Optoma launches Panoview, the screen to any projector

FOR IMMEDIATE RELEASE

PR00058

**Watford (November, 2006)** – Optoma, one of the worlds leading names in digital projection and display devices, introduces the Panoview range of front projection screens.

Ideal for watching the latest blockbuster movie, giving important presentations or playing games, Panoview screens offer the ideal solution for home and business.

Panoview screens are available in 4 versatile styles: Pull down, motorised, fixed frame and portable lift. Offering both 4:3 and 16:9; with 3 high quality screen materials, traditional matte white (1.0 gain), high gain glass beaded (2.8 gain) and GrayWolf™ II high contrast grey glass beaded (1.8 gain). These are all available in a variety of sizes from 74" diagonal to 120" diagonal.

As you would expect from one of the industry's foremost suppliers of Home Theatre projectors all the screens are designed to offer exceptional image quality. Especially impressive are the GrayWolf™ II screens. Traditionally screens are either high contrast and therefore low gain (i.e. below 1.0 gain) or high gain and low contrast, GrayWolf™ II offers both without compromise.

GrayWolf™ II gives exceptional contrast with blacker more dynamic blacks, crystal whites and more vivid saturated true colours. Thanks to the superb 1.8 gain of GrayWolf™ II it is even possible to produce exceptionally bright images in rooms that are not totally dark or with lower brightness home cinema projectors. All this makes GrayWolf™ II the ideal partner to any home cinema installation.

And because Panoview screens are available in a wide range of sizes and styles they will fit into any home, office or lifestyle.
